

Les petits plats

PRESENTATION DU PROJET n°7

MISE EN SITUATION

Freelance je viens d'être missionné par l'entreprise "Les petits plats" en temps que Développeuse Front-end pour une mission de 3 mois.

Après avoir édité des livres de cuisine pendant plusieurs années, vous avez décidé de voud lancer dans un nouveau projet : réaliser son propre site de recettes de cuisine

faire deux implémentations différentes pour la recherche de recettes afin de pouvoir comparer leurs performances et choisir la meilleure.

LISTE DEROULANTE

```
selectIngredients = new FilterTags({
220
          selectElement: "#selectIngredients",
221
          defaultSelectLabel: "Ingrédients",
          initialListItem: loadIngredients(recipes.data),
          searchEventCallback: handleSelectIngredientOnSearchEvent,
224
          deleteTagEventCallBack: (tags) => {
225
            searchResult = recipes.searchRecipeExt(searchTerms, tags, selectAppareils.listItem, selectUstensiles.listItem)
226
            displaySearchResult({
              searchTerms: "",
228
              result: searchResult
            });
230
231
            resetSelects();
232
          resetEventCallBack: handleSelectOnResetEvent
```

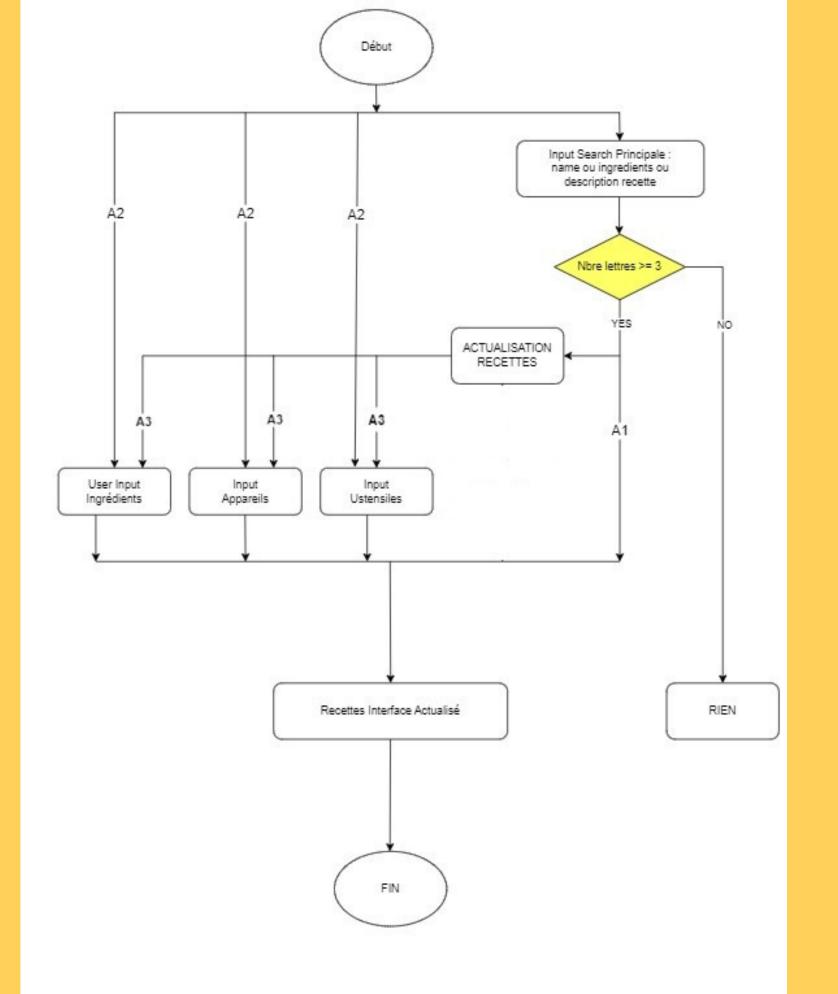

```
// Function to load ingredients from recipes, removing duplicates
// Fonction pour charger les ingrédients à partir des recettes, en supprimant les doublons
const loadIngredients = (fromRecipes) => {
    const ingredients = [];
    fromRecipes.forEach((recipe) => {
        recipe.ingredients.forEach((ingredient) => {
            ingredients.push({
                name: ingredient.ingredient,
                isSelected: false
            });
        });
};
return removeDuplicateObjects(ingredients, "name"); You, le mois dernier * recipes
};
```

```
createItemElement({ name, isSelected }) {
 let li = document.createElement("li");
 li.textContent = name;
 li.className = isSelected ? "selected" : "";
  if (isSelected) {
   const image = document.createElement("img");
    image.className = "img my-custom-class";
    image.src = "../assets/xmark-circle.svg";
    image.alt = "xmark-circle";
    image.addEventListener("click", (event) => {
     event.stopPropagation(); // Empêche la propagation de l'événement de clic au conteneur li
     this.removeListItem(li);
    });
    li.appendChild(image);
 li.addEventListener("click", () => {
   this.handleItemClick(li);
 });
 this.options.appendChild(li);
```

```
import { recipes } from "../data/recipes.js";
const recipeContainer = document.querySelector("#recipes");
let totalRecipes = document.querySelector("#totalRecipes");
function generateHTMLCard(recipe, ingredientInsertHtml) {
    <article class="recipe">
         <img src=../assets/images/${recipe.image} alt=${recipe.name} loading="lazy" />
         <span class="timeCooking">${recipe.time}min </span>
         <h2 class="recipe-h2">${recipe.name}</h2>
         <section class="recipe-header">
           <span class="recipe-small-title">recette</span>
          ${recipe.description}
         </section>
         <section class="recipe-ingredient">
          <span class="recipe-small-title">Ingrédients</span>
           ${ingredientInsertHtml}
         </section>
        </article>
```

Affichage des recettes

```
export function displayRecipes(data) {
61
       if (!data) {
62
         data = recipes;
63
64
65
       if (totalRecipes) {
         totalRecipes.innerHTML = `${data.length} recettes`;
66
67
68
69
       recipeContainer.innerHTML = "";
       const recipeCards = data.map((recipe) => {
70
71
         let ingredientInsertHtml = recipe.ingredients
           .map((ingredient) => generateHTMLIngredient(ingredient))
72
73
           .join("");
74
75
         return generateHTMLCard(recipe, ingredientInsertHtml);
76
       });
77
78
       recipeContainer.innerHTML += recipeCards.join("");
79
80
```

Recherche principale

```
// BARRE DE RECHERCHE (SEARCH BAR)
// Checks if there is a match for a given ingredient in a list
// Vérifie s'il y a une correspondance pour un ingrédient donné dans une liste
IngredientMatch(ingredients, searchTerm) {
  const matchingIngredient = ingredients.find((anIngredient) => {
    const { ingredient } = anIngredient;
    return ingredient.toLowerCase().includes(searchTerm.toLowerCase());
  return matchingIngredient != null;
// Checks if there is a match for a given appareil (appliance)
// Vérifie s'il y a une correspondance pour un appareil donné
AppareilMatch(anAppareil, searchTerm) {
 return anAppareil.toLowerCase().includes(searchTerm);
// Checks if there is a match for a given ustensile (utensil)
UstensilesMatch(ustensiles, searchTerm) {
  const matchingUstensiles = ustensiles.filter((anUstensile) => {
   return anUstensile.toLowerCase() === searchTerm.toLowerCase();
  return matchingUstensiles.length > 0;
```

-A1-

Tests

```
// Searches for recipes based on a search term
// Recherche des recettes en fonction d'un terme de recherche (recherche principale)
searchRecipes(searchTerms) {
searchTerms = searchTerms.toLowerCase();

return this.data.filter((recipe) => {
    const { name, description, ingredients } = recipe;
    const lowerCaseName = name.toLowerCase();
    const lowerCaseDescription = description.toLowerCase();

if (lowerCaseName.includes(searchTerms) || lowerCaseDescription.includes(searchTerms)) {
    return true; // Correspondance trouvée dans le nom ou la description
} else {
    // Aucune correspondance dans le nom ou la description, vérifiez les ingrédients
    const ingredientMatch = this.IngredientMatch(ingredients, searchTerms);
    return ingredientMatch;
}
};
```

```
const initializeEvents = () => {
        // Récupère l'élément du champ de recherche par son identifia
187
        const searchValue = document.getElementById("search-bar");
       // Ajoute un gestionnaire d'événements pour l'événement "keyup'
        searchValue.addEventListener("keyup", () => {
189
190
          // Met à jour la variable 'searchTerms' avec la valeur du c
191
          searchTerms = searchValue.value;
192
          // Utilise la fonction de délai (debounce) pour éviter une
193
          const callSearch = debounce(() => {
194
            searchRecipes(searchTerms);
195
          }, 300);
196
          // Vérifie si la longueur des termes de recherche est supér
197
          if (searchTerms.length >= 3) {
198
            // Si oui, appelle la fonction de recherche avec un déla
199
             callSearch();
200
          } else {
201
            // Si la longueur des termes de recherche est inférieure
202
            // Réinitialise l'affichage des recettes, ainsi que les s
203
            displayRecipes();
204
            selectIngredients.reset();
205
            selectAppareils.reset();
206
            selectUstensiles.reset();
            searchResult = [...recipes.data];
208
        });
210
```

Recherche uniquement par tag

```
selectIngredients = new FilterTags({
220
         selectElement: "#selectIngredients",
221
         defaultSelectLabel: "Ingrédients",
222
         initialListItem: loadIngredients(recipes.data),
          searchEventCallback: handleSelectIngredientOnSearchEvent,
224
          deleteTagEventCallBack: (tags) => {
            searchResult = recipes.searchRecipeExt(searchTerms, tags, selectAppareils.listItem, selectUstensiles.listItem)
            displaySearchResult({
             searchTerms: "",
             result: searchResult
           });
230
231
           resetSelects();
         resetEventCallBack: handleSelectOnResetEvent
```

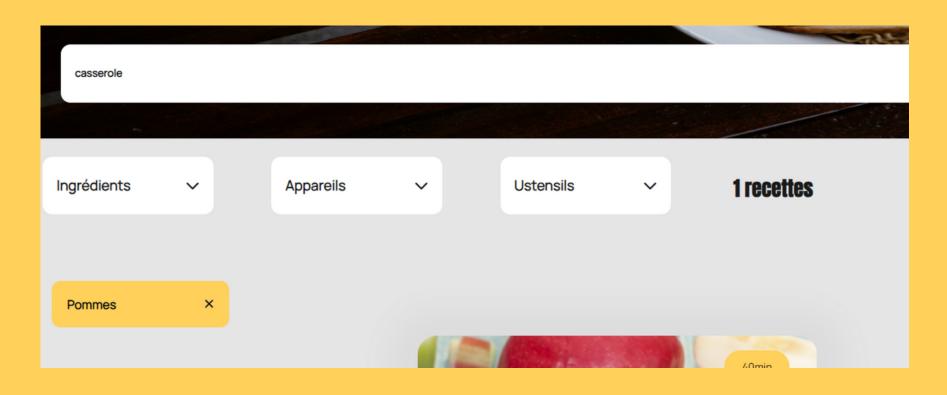

```
const loadIngredients = (fromRecipes) => {
       const ingredients = [];
37
       fromRecipes.forEach((recipe) => {
         recipe.ingredients.forEach((ingredient) => {
38
           ingredients.push({
40
             name: ingredient.ingredient,
41
             isSelected: false
42
           });
43
         });
44
       });
45
       return removeDuplicateObjects(ingredients, "name");
```

```
const handleSelectIngredientOnSearchEvent = (searchTerms) => {
        const filteredResults = searchResult.filter((element) => {
108
          const temp = element.ingredients.filter((ingredient) => {
109
            return ingredient.ingredient.toLowerCase() === searchTerms.toLowerCase();
110
         });
111
         return temp.length > 0;
112
        });
113
114
        searchResult = [...filteredResults];
115
116
        selectAppareils. updateSelectedItems(loadAppareils(filteredResults));
117
        selectUstensiles. updateSelectedItems(loadUstensils(filteredResults));
118
119
        displaySearchResult({
120
         searchTerms: searchTerms,
121
         result: filteredResults
122
        });
123
        selectIngredients. updateSelectedItems(loadIngredients(filteredResults));
```

TESTS

Recherche principale plus

tags -A3-

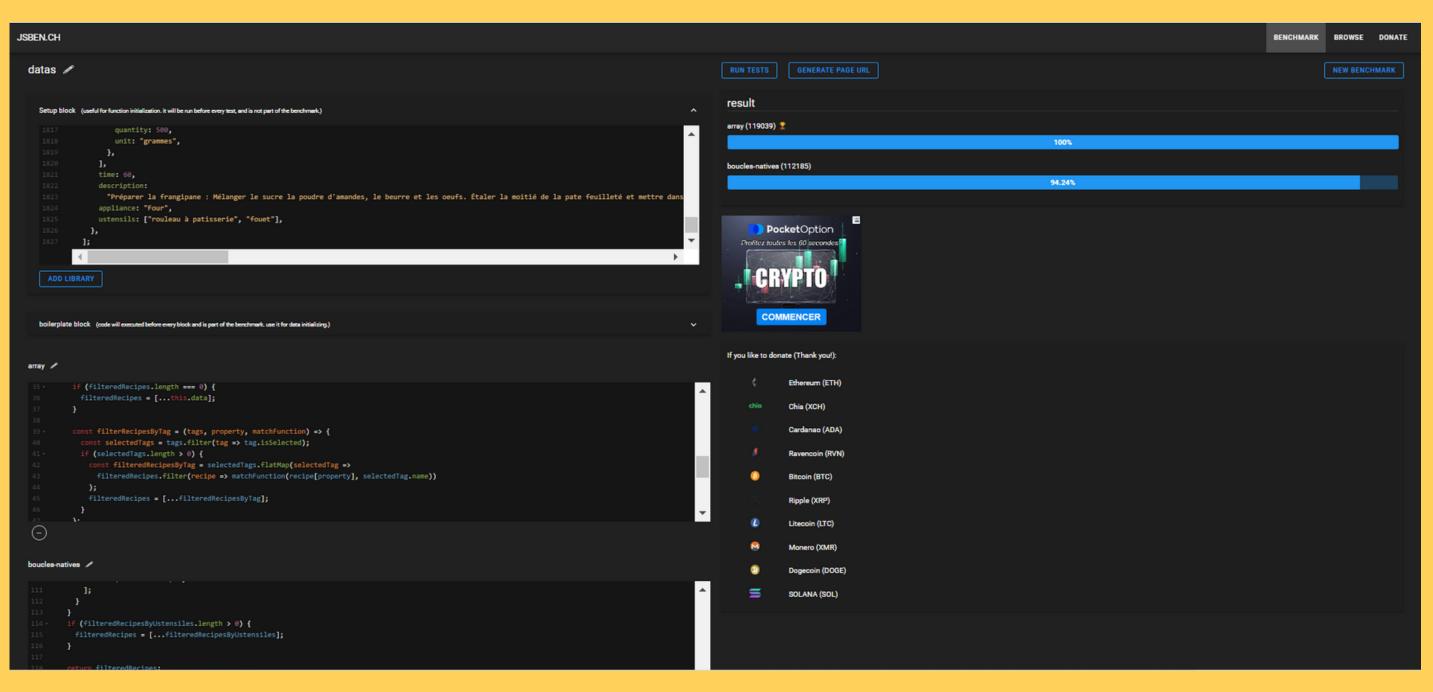

```
//PARTIE SELECT
// Create Select instances
// Créer des instances de sélection
selectIngredients = new FilterTags({
 selectElement: "#selectIngredients",
